DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 5-7, drawn to DNA encoding a GFP, classified in class 536, subclass 23.1.
 - II. Claims 2-4, 21-45, drawn to green fluorescent protein, classified in class 530, subclass 350.
 - III. Claims 8-20, drawn to a nucleic acid encoding fusion protein biosensor, classified in class 536, subclass 23.4.
2. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II-III, restriction for examination purposes as indicated is proper.
3. The inventions are distinct, each from the other because of the following reasons:

The nucleic acids of invention I are related to the protein of invention II by virtue of encoding same. The DNA molecule has utility for the recombinant production of the protein in a host cell. Although the DNA molecule and protein are related since the DNA encodes the specifically claimed protein, they are distinct inventions because the protein product can be made by another and materially different process, such as by synthetic peptide synthesis or purification from the natural source. Further, the DNA may be used for processes other than the production

of the protein, such as nucleic acid hybridization assay. Thus, they can be unconnected in use and operation.

Inventions I and II and patentably distinct from invention III as they are distinct products differing in structure and function that could be used in materially different processes.

4. Invention II contains claims directed to the following patentably distinct species of the claimed invention: SEQ ID NO: 2-27.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 2 (SEQ ID NO: 2) is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 1653

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Advisory Information

5. A telephone call was made to Craig Cochenour on September 16, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
